LESJÖFORS

– the complete spring package

GENERAL INFORMATION

LESJÖFORS GAS SPRING...

...range is primarily designed for cars in the European market. All articles in this catalogue are stock items and are available in small or large quantities. Very large orders can be specially manufactured.

We also manufacture and distribute a wide range of standard, heavy duty, sport coil springs and leaf springs.

TECHNICAL INFORMATION

Gas springs consist of a pressure tube, piston rod, piston, seals and other components. They also contain a small amount of oil which produces a damping effect as well as keeping the seals lubricated.

The gas spring is filled with compressed nitrogen which forces the piston rod to extend whenever it has been compressed. The gas pressure is carefully adjusted to obtain the correct force depending on, for example, the weight of the rear hatch.

QUALITY

All springs are inspected and tested before delivery, to ensure that only high quality products leave the factory.

"Lesjöfors Fjädrar AB" and "Lesjöfors Automotive" are registered Trade marks and cannot be used without written permission from the company. Reprinting or copying is only permissible with the written consent of the editor. All car makes, chassis numbers, oe.numbers, pictures and images are meant for illustration and information purposes only. The products are not produced by the oe.producer

IMPORTANT

-  A Gas Spring is filled with oil and highly pressurised gas. Therefore, do not try to open or drill into a Gas Spring.
-  First, check and compare the design, length and mounting points before installing the new gas spring.
-  Remember that it is the gas springs that support the bonnet and rear hatch. To avoid injuries of any kind, ensure a secure fastening of the bonnet or rear hatch when replacing springs.
-  Check mounting points in the body, if they are damaged they should be changed or repaired.
-  We recommend that the springs on the vehicle are replaced in pairs.
-  On a car that has been extra equipped with blinds, hi-fi speakers or spoilers for example, there is a risk that the rear hatch may be too heavy for gas springs designed with the original elevating power. Similarly, if an original aluminium bonnet is replaced with a steel item (e.g. after an accident), that may also prove to be too heavy.
-  Extremely cold temperatures reduce the gas springs lifting capabilities.
